The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Election/Restriction

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 89-149 and 178, drawn to recombinant adenoviruses, vectors and host cells comprising said vectors and methods of making and use said adenoviruses.

Group II, claim(s) 150, drawn to a transgenic mammal.

Group III, claim(s) 151-152, drawn to method of making adenoviruses.

Group IV, claim(s) 153, drawn to a method of using adenoviruses for gene expression.

Group V, claim(s) 154-177, drawn to a method of making a medicament and a pharmaceutical composition.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The claimed invention does not possess a special technical feature since it is anticipated by the prior art and hence does not represent an advance over said prior art (See for example, US 6,713,055, wherein the E1a promoter is deleted and the E1a coding region is operably linked to a cell specific promoter (hTERT) but comprises an intact E1b promoter and coding region). In these adenoviruses the E1a gene would not be expressed in a cell until the cell became cancerous (due to telomerase expression in cancer cells) but the E1b gene would be expressed prior to the cell becoming

Art Unit: 1636

cancerous (albeit at a low level). Therefore, the prior art teaches an adenovirus which expresses an E1b protein prior to expression of an E1a protein. There is no unity of invention.

The technical feature of Group I which defines an advance over each of the other Groups is an adenovirus which reverses expression of adenoviral genes (i.e. a later gene such as E1b is expressed prior to a earlier expressed gene (i.e. E1a). The technical feature of Group II is a transgenic animal which is a non-obvious composition which although it contains the features of the invention of Group I, is an independent invention because the claims are reciting a living animal which comprises characteristics independent of, and distinct from, an adenovirus.

The technical feature of Group III is a method of making the adenovirus. The adenovirus can be made by other patentably distinct methods such as in vivo manufacture of the adenovirus in experimental animals.

The technical feature of Group IV is a method of using the claimed adenoviruses as gene expression vectors. The adenoviruses can be used in other patentably distinct methods such as a gene therapy vector for treating diseases in humans in vivo.

The technical feature of Group V is a method of using the claimed adenoviruses for making a medicament for the treatment of diseases. The claimed adenoviruses can also be used in patentably distinct methods such as gene expression vectors for expression of gene products of interest in cells in vitro.

The methods of Groups III-V are distinct from each other because each recites distinct, unrelated, method steps directed to patentably distinct outcomes (i.e. treatment

of disease vs. making an adenovirus, etc.) with each representing an advance over the other. The composition of Group II is likewise distinct from the methods of Groups III-V in that the methods do not recite making or use of a transgenic mammal and while the transgenic mammal comprises the claimed adenovirus, the transgenic mammal represents an independent invention in that it is not obvious over methods of making or using the recited adenoviruses.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Art Unit: 1636

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1636

The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Guzo, Ph.D., whose telephone number is (571)

Art Unit: 1636

272-0767. The examiner can normally be reached on Monday-Thursday from 8:00 AM to 5:30 PM. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Woitach, can be reached on (571) 272-0739. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
